Velosolutions UCI Pump Track World Championships 2028

To whom it may concern

We are writing to you with regard to the proposed pump track development in Perth and its potential to serve as a host venue for international pump track events.

Velosolutions is the founder, rights holder, organiser, and title sponsor of the UCI Pump Track World Championships. As the organisation responsible for financing the series and bearing the associated financial risk, Velosolutions retains full authority over the selection of venues for both qualifier events and the World Championship Finals. Consequently, all official events are exclusively held on Velosolutions pump tracks, as these are the only facilities that meet the requisite competition standards.

Throughout the calendar year, we conduct between 20 and 25 qualifier events worldwide, culminating in the World Championship Finals — the foremost global competition in pump track racing.

“The creation of the UCI Pump Track World Championships is a recognition of the specialty at the highest level and a demonstration of our sport’s dynamism. With the knowhow of Velosolutions we aim to meet the expectations of a public that enjoys a show and to make our sport even more popular with the younger generation.”

UCI President David Lappartient (2019)

Velosolutions Australia PTY LTD serves as our official and exclusive franchise partner in Australia and is the sole entity authorised and certified to construct Velosolutions pump tracks within the country. Should they be appointed to deliver the Perth project, the resulting facility will be fully compliant with UCI competition standards.

By means of this letter, we wish to formally confirm our intent to bring the Velosolutions Pump Track World Championships to Perth, Australia, in 2028, and to initiate discussions with the relevant local authorities with a view to realising this exceptional event.

Kind regards

Christoph Müller
Managing Director
